WHAT IS AI?

- AI stands for Artificial Intelligence.
- It is like a computer brain that helps machines think and learn like humans.
- AI can solve problems, answer questions, and make smart decisions.
- It is used in phones, computers, cars, and even hospitals.

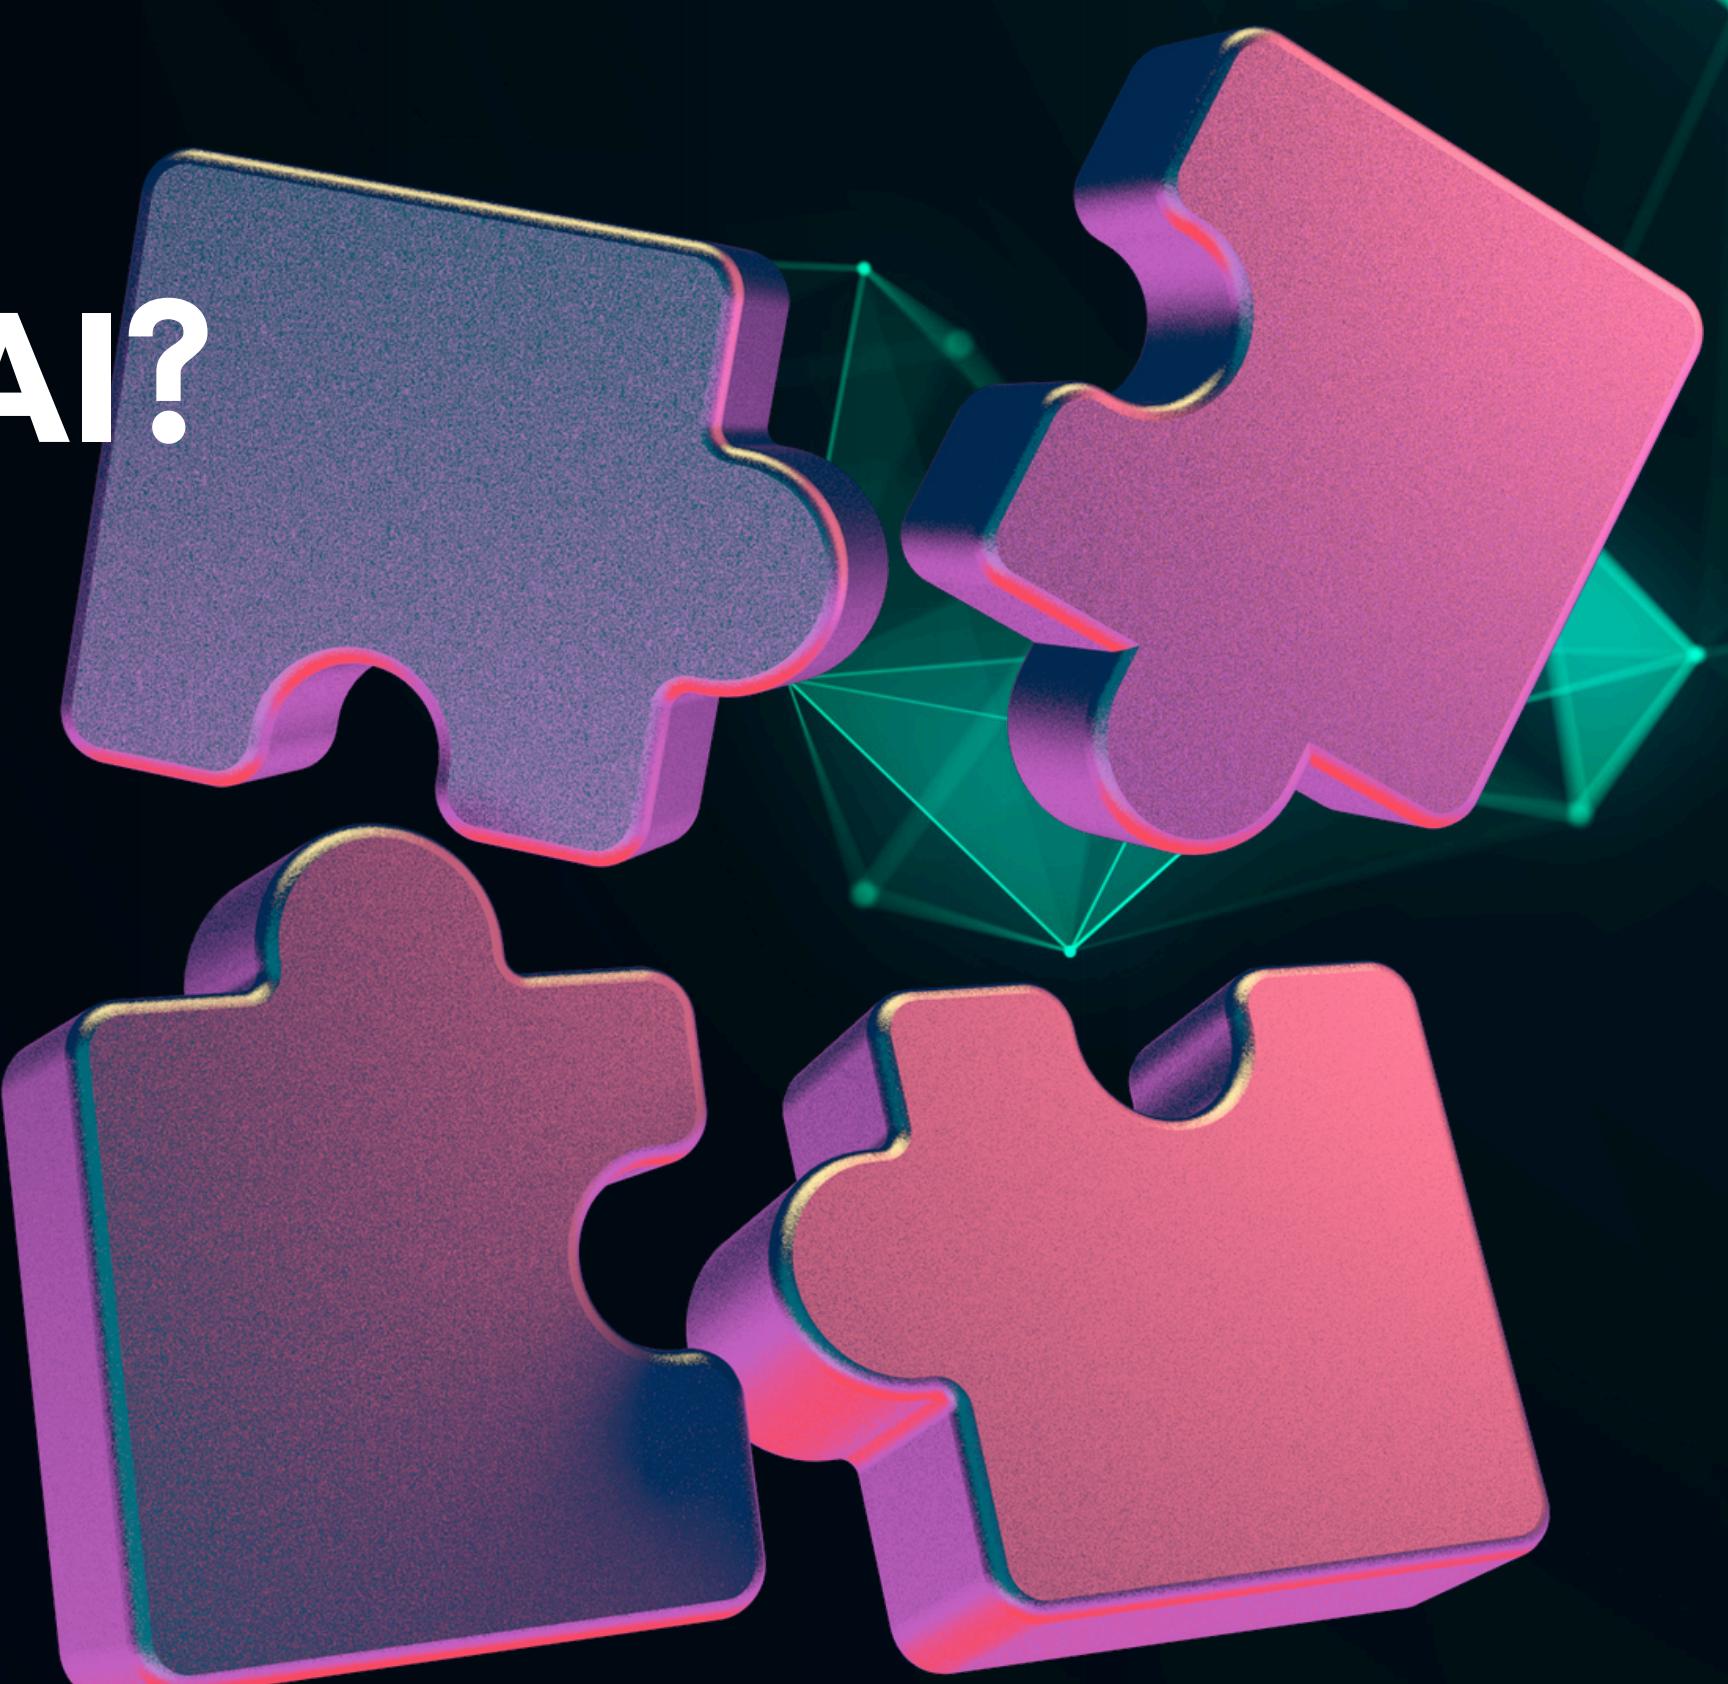

HOW DOES IT WORK?

- AI learns from data—just like how we learn from books and experience.
- It looks at lots of information and finds patterns.
- AI can recognize faces, understand speech, and make decisions.
- It gets smarter over time by practicing, like how we get better at sports or studies.

WHERE DO WE SEE AI?

- Mobile Phones - AI helps in voice search and face unlock.
- Schools - AI can help teachers check answers and explain things.
- Hospitals - AI helps doctors find diseases faster.
- Shops & Markets - AI helps in online payments and keeping track of items.
- Farms - AI helps farmers grow crops better.

WHY IS IT IMPORTANT?

- Makes life easier - AI helps in phones, schools, hospitals, and transport.
- Saves time - AI can do work faster than humans, like checking many exam papers quickly.
- Helps in learning - AI can explain things in different languages and teach difficult subjects.
- Creates new jobs - People can work in AI-related fields in the future.
- Helps everyone - AI can support doctors, farmers, teachers, and shopkeepers.

CONCLUSION

- AI can play games and even beat world champions!
- Some robots can talk and walk like humans.
- AI can paint pictures and write stories on its own.
- Self-driving cars use AI to see the road and avoid accidents.

- AI is a powerful tool that helps in many areas of life.
- It makes work faster and easier, but it cannot replace humans.
- Learning about AI can help us get better jobs in the future.
- Humans create AI, so we must use it wisely and for good.

THANK YOU!
